INDIA HAS THE LARGEST BLIND POPULATION IN THE WORLD!

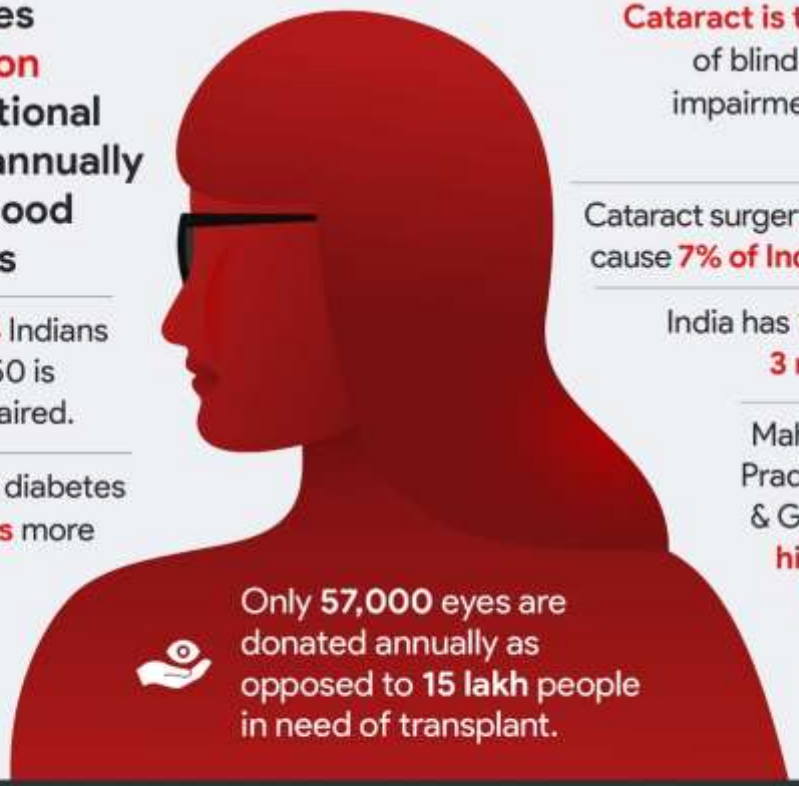

World Braille Day

AND, 90% OF IT WAS PREVENTABLE

India loses $118 billion gross national income annually to childhood blindness

1 in every 4 Indians above age 50 is visually impaired.

People with diabetes are **25 times** more vulnerable.

Cataract is the no. 1 cause of blindness and vision impairment; followed by corneal issues.

Cataract surgery complications cause **7% of India's blindness.**

India has **1 eye bank per 3 million people.**

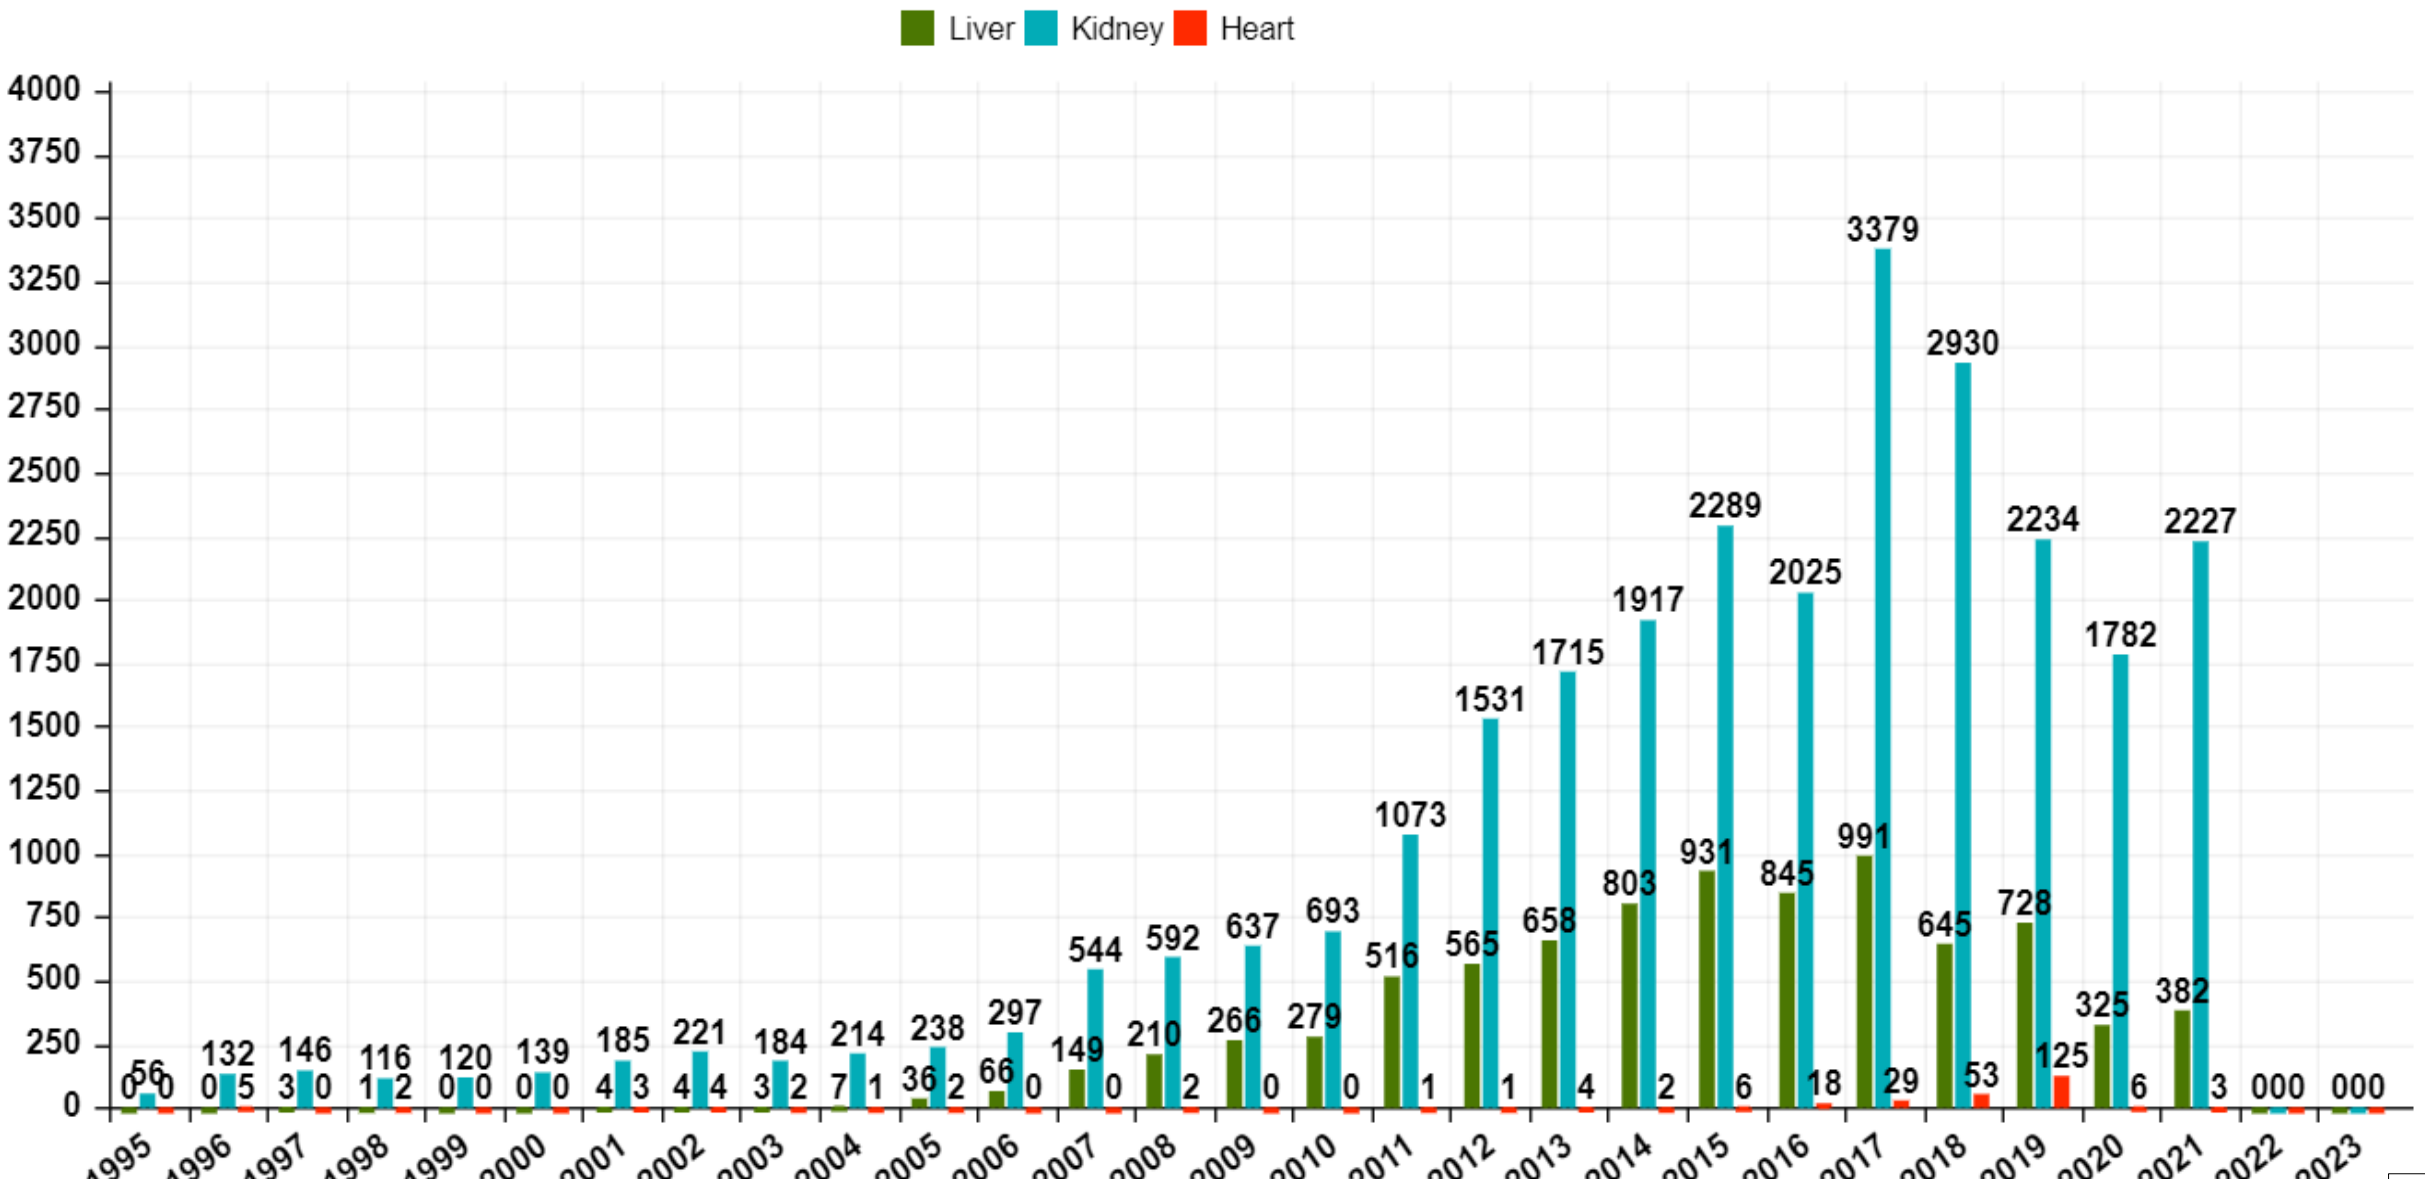

Maharashtra, Uttar Pradesh, Karnataka & Gujarat have the **highest number of eye banks.**

Only **57,000** eyes are donated annually as opposed to **15 lakh** people in need of transplant.

11 states & union territories don't even have a functional eye bank; Tripura, Uttarakhand, Mizoram have just 1.

India is home to one-third of the global blind population; **only 1% is Braille-literate.**

Bar Chart For All Organs

Types of Organ Donors

Living Donors

A Living donor can donate certain organs, such as a kidney or a segment of their liver, while they are alive.

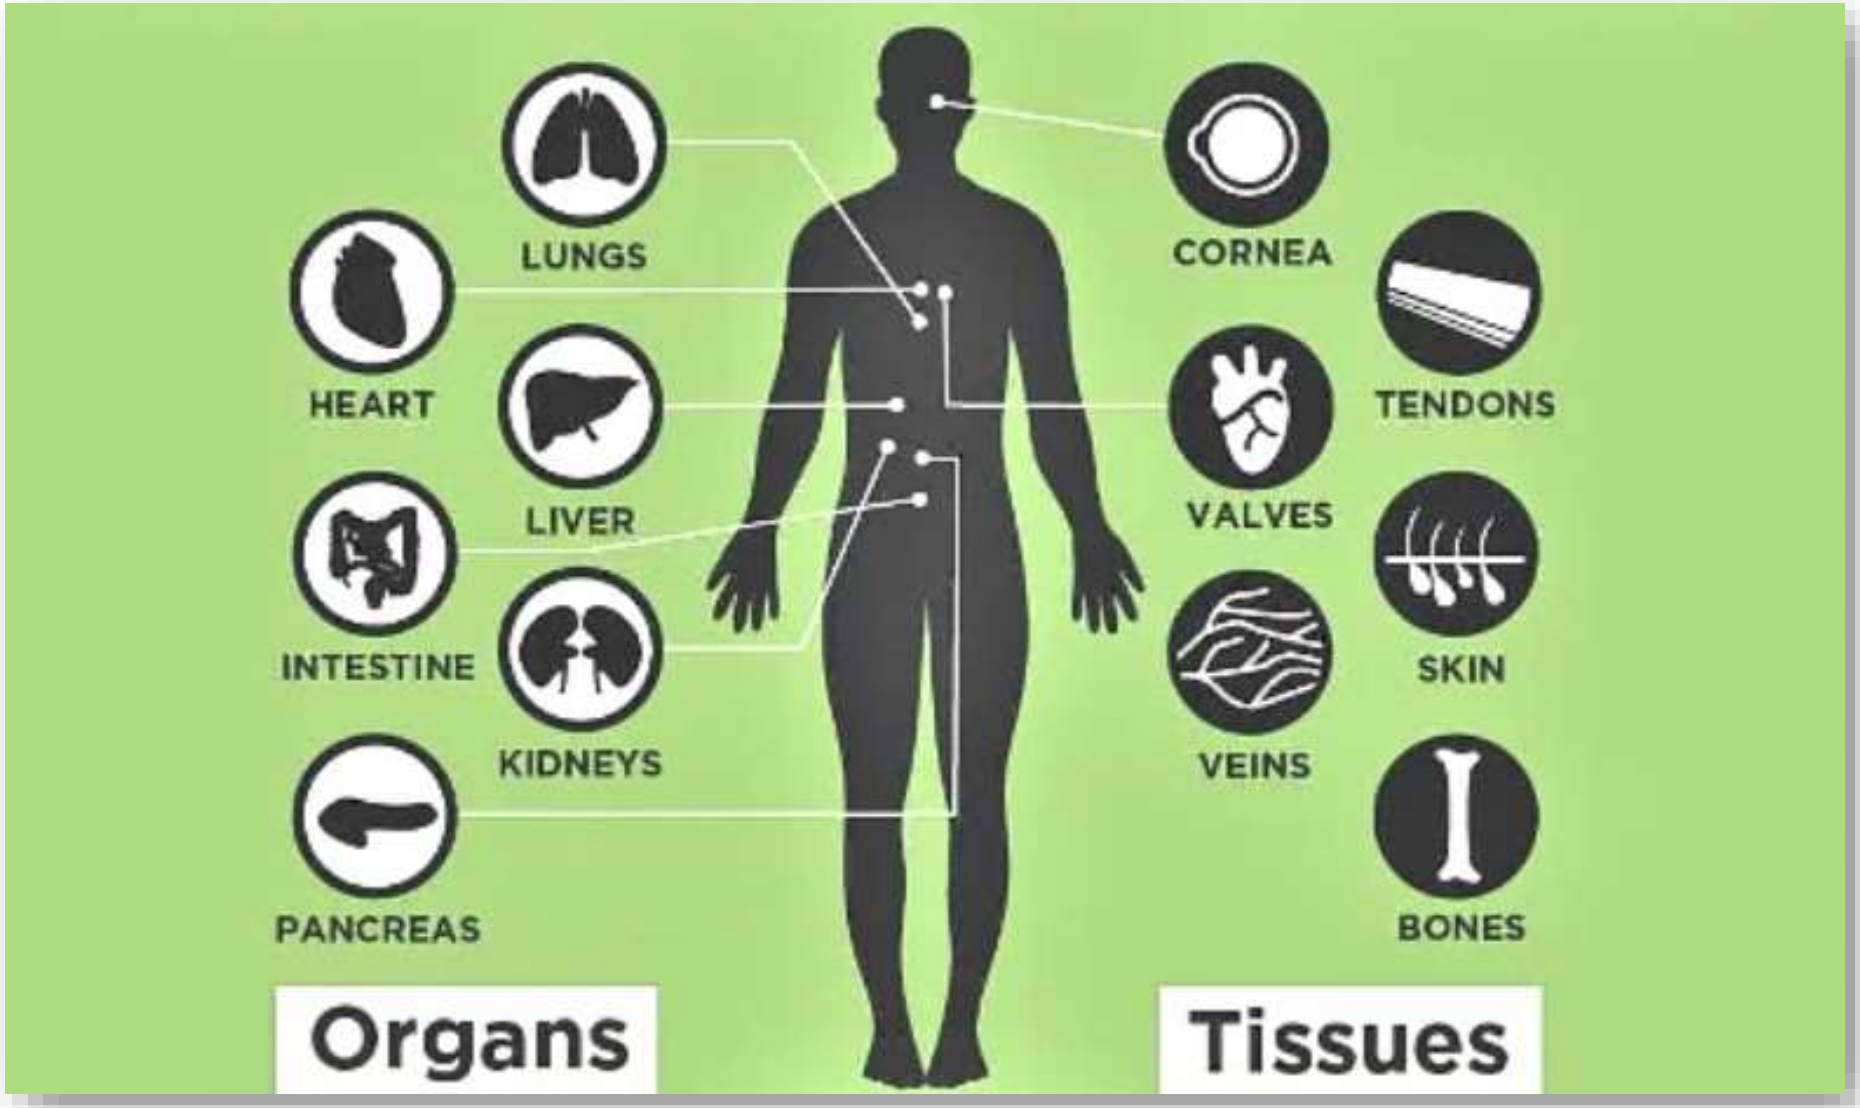

Deceased Donors

Deceased donors are individuals who, upon their passing, can donate organs like the heart, lungs, liver, kidneys, pancreas, and more.

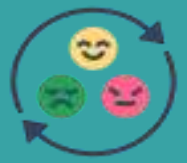

What Can You Donate?

Why Should You Donate?

Organ Donation is a gift that holds the power to transform and save lives, leaving a lasting and meaningful impact on countless individuals and their families.

SAVING PRECIOUS LIVES

Organ donation offers a chance of survival and improved quality of life.

CREATING HOPE FOR BETTER LIFE

Donation provides hope to those on waiting lists, offering a healthier future.

CONTRIBUTING TO SOCIETY

Fosters a culture of empathy that can benefit society and inspire others to consider the life-changing act of donation.

CONTRIBUTING TO SCIENCE

Organ donation drives research, leading to better transplant techniques and treatments.

How To Become A Donor?

1. Register online on the National Organ & Tissue Transplant Organization (NOTTO) website or fill a donor card available at authorized hospitals.
2. Medical professionals evaluate your eligibility based on age and health. Brain Death Certificate is mandatory in that case of deceased donors.
3. Discuss your decision with your family to ensure they understand and are in support of your choice.
4. Donors and recipients both receive close monitoring, care and regular follow-up post transplant from dedicated medical professionals.

Organ transplantation involves a meticulous surgical procedure to replace a failing organ with a healthy one from a donor.

Join the organ donation movement today and be a hero by giving the gift of life.

Are You Eligible To Donate?

01 **Age**

Generally, organ donors should be between the ages of 18 and 60 years.

02 **Medical History**

Donors should have a healthy medical history, free from major illnesses or conditions that could affect organ suitability.

03 **Disease-Free Organs**

Potential donors should be free from infectious diseases or conditions that could be transmitted to the recipient.

04 **Compatibility**

For living donors, compatibility between the donor and recipient's blood and tissue types is essential to minimise the risk of rejection.

+

05 **Emotionally Strong**

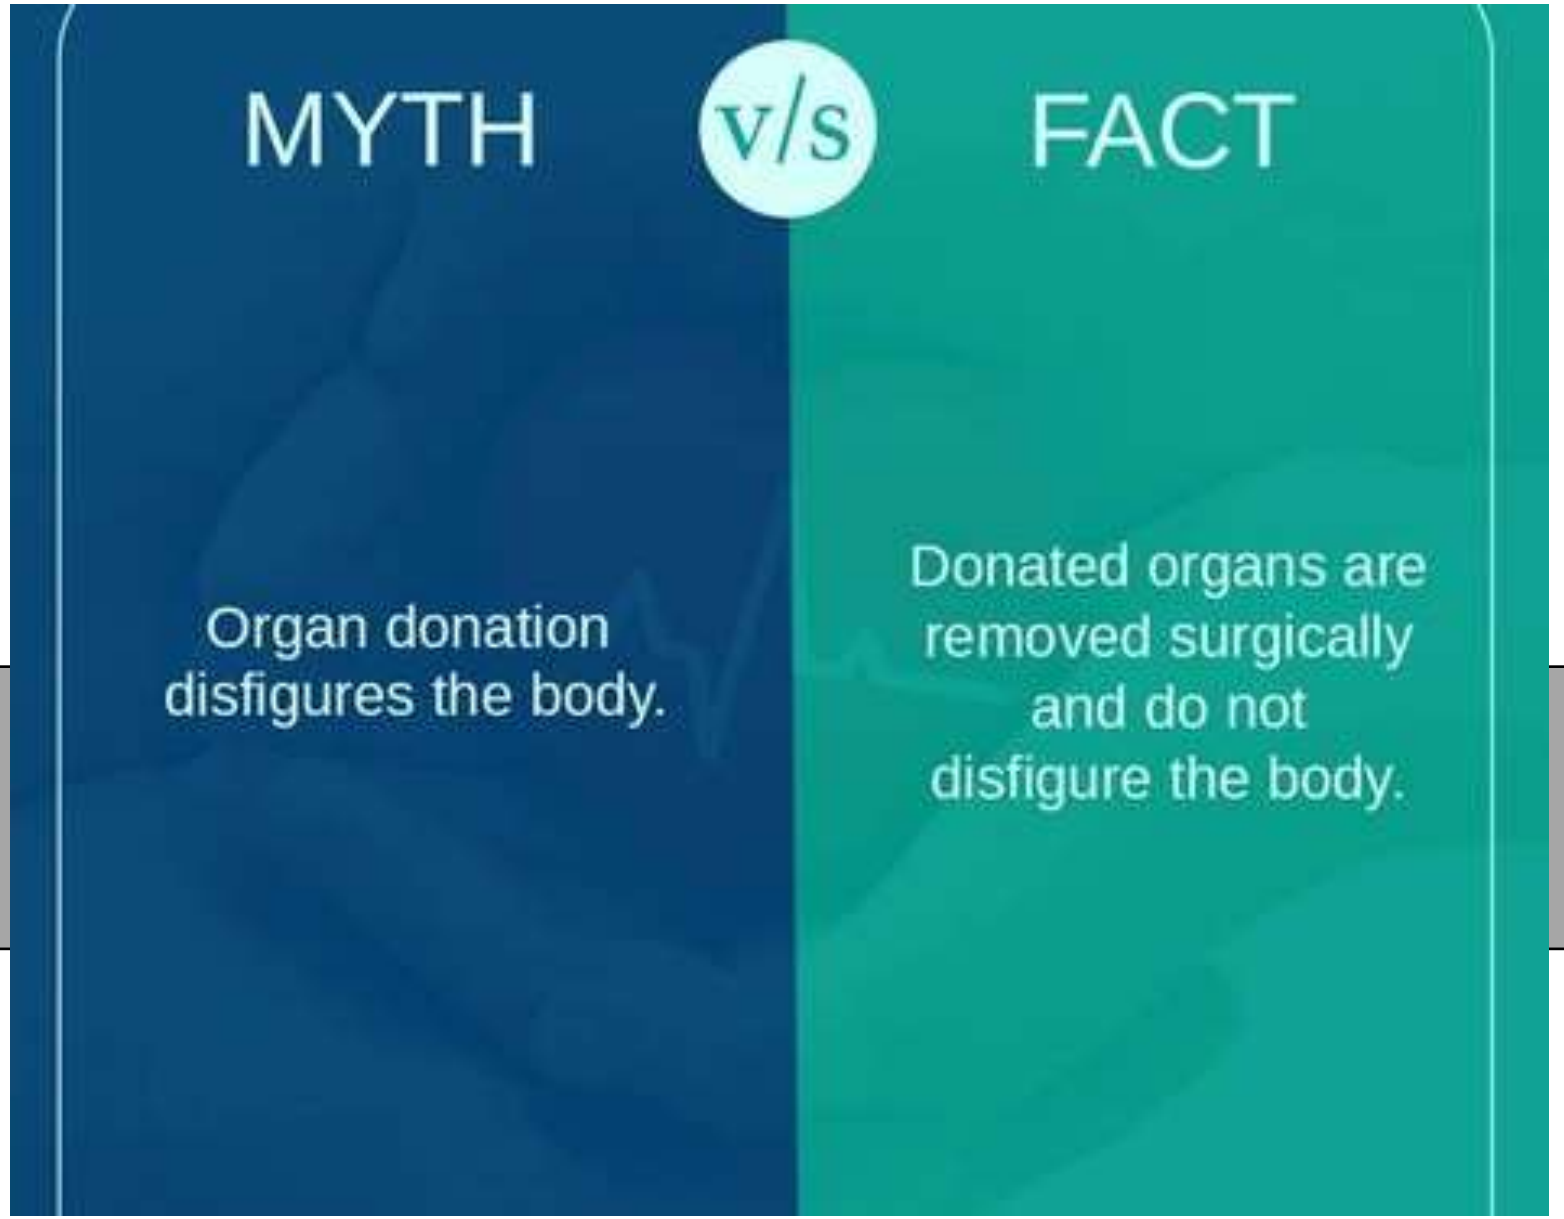

Donors should be mentally and emotionally stable, capable of making a voluntary and informed decision about organ donation.

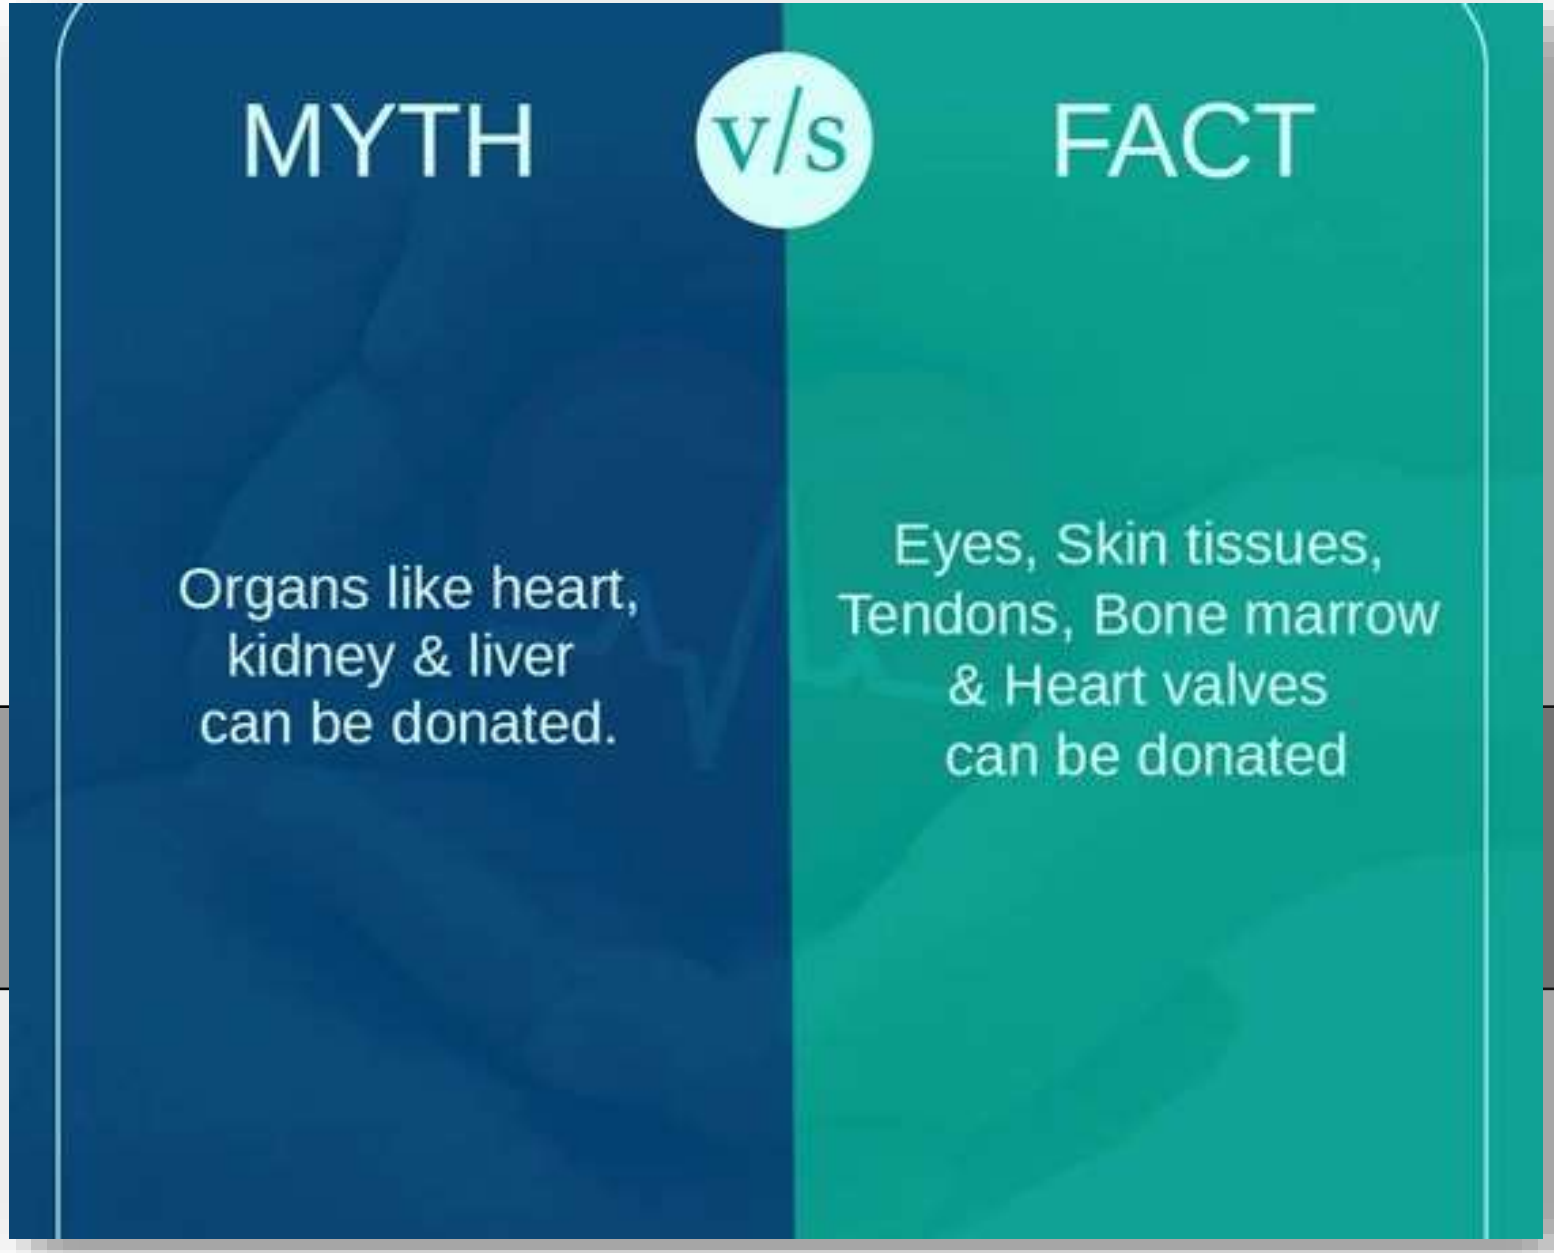

06 **Lifestyle**

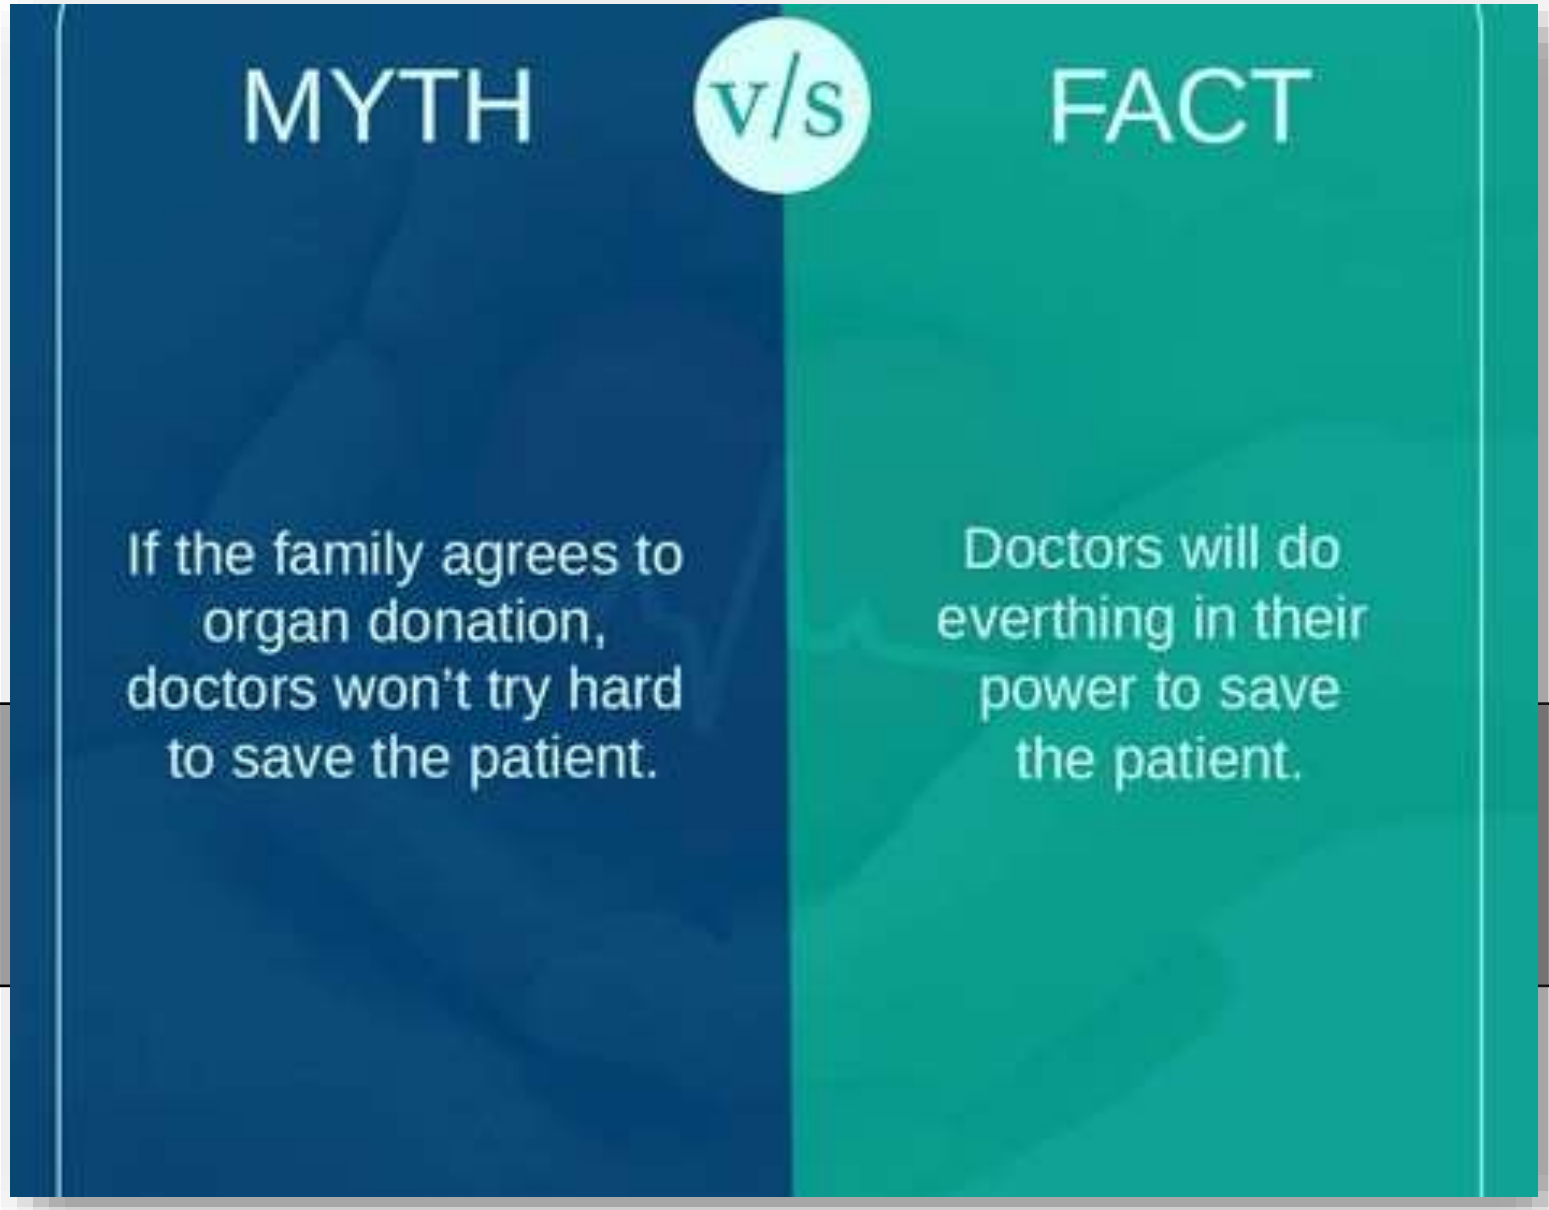

High-risk behaviours and lifestyle, such as intravenous drug use may disqualify a potential donor

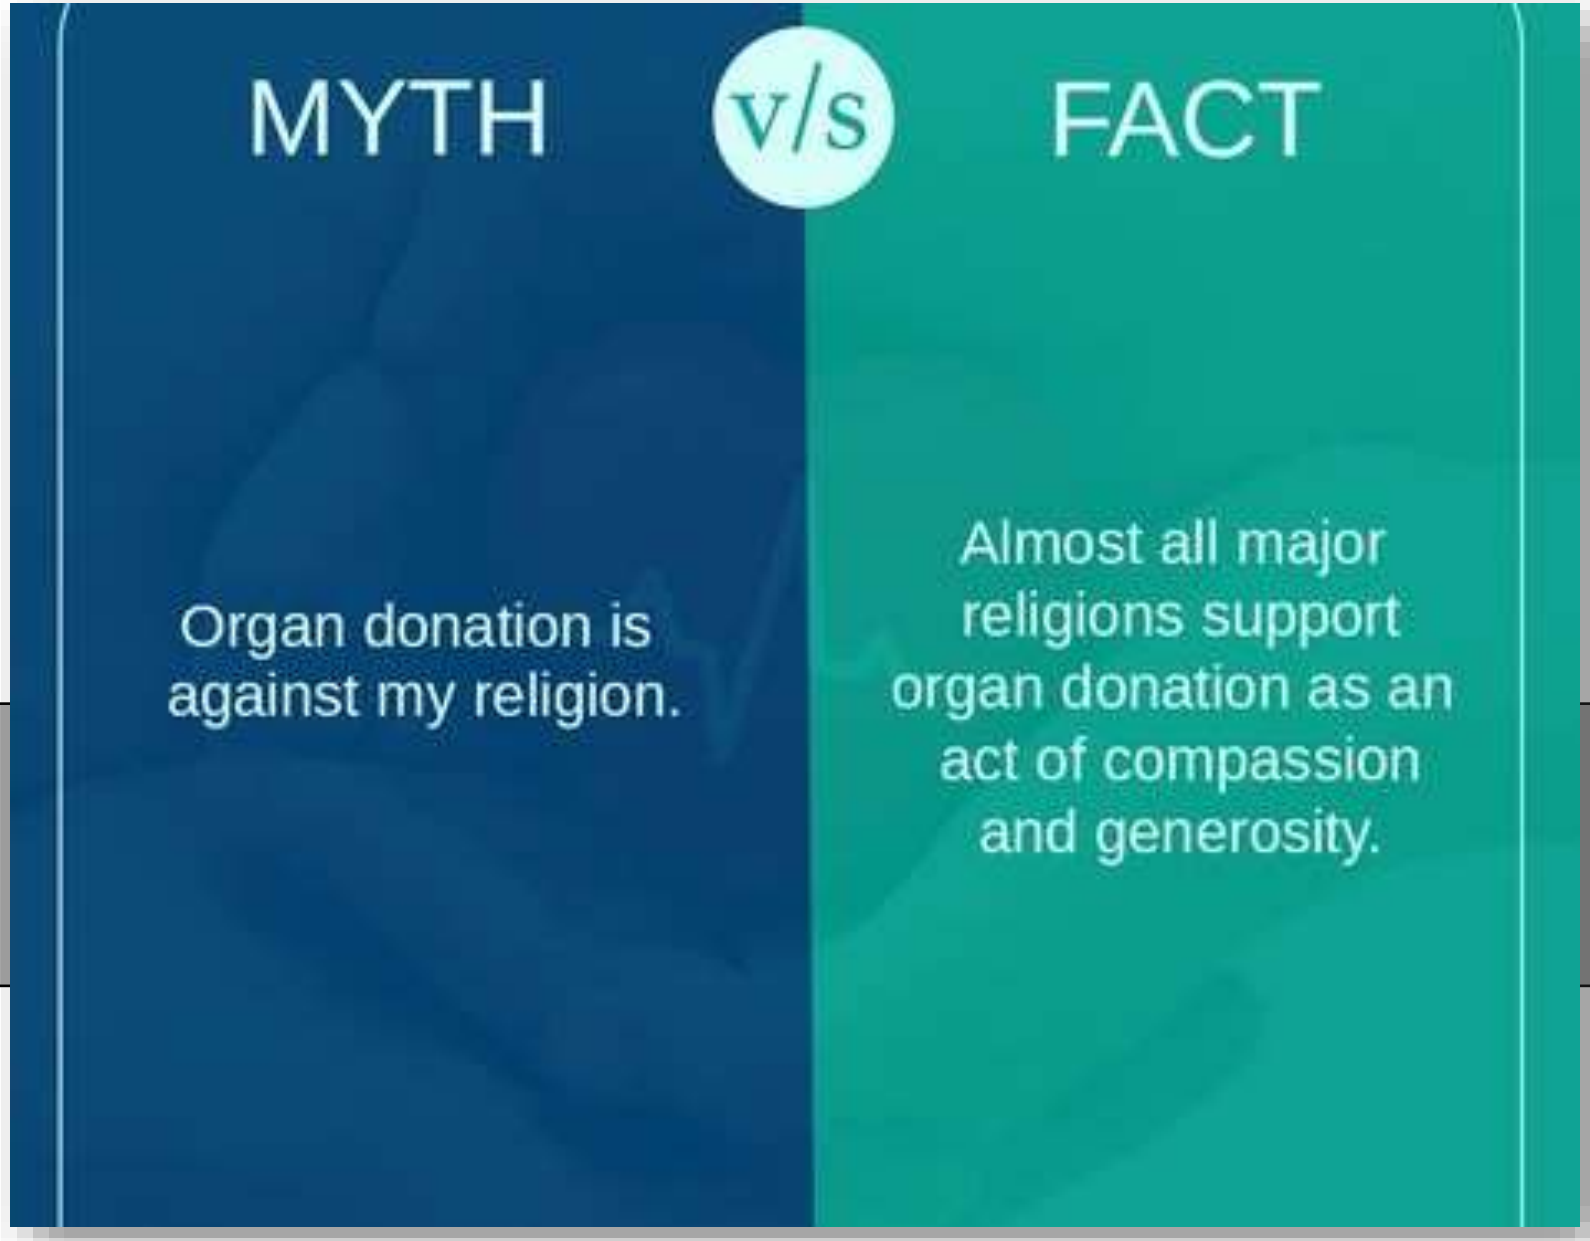

Let’s Debunk Some MYTHS!

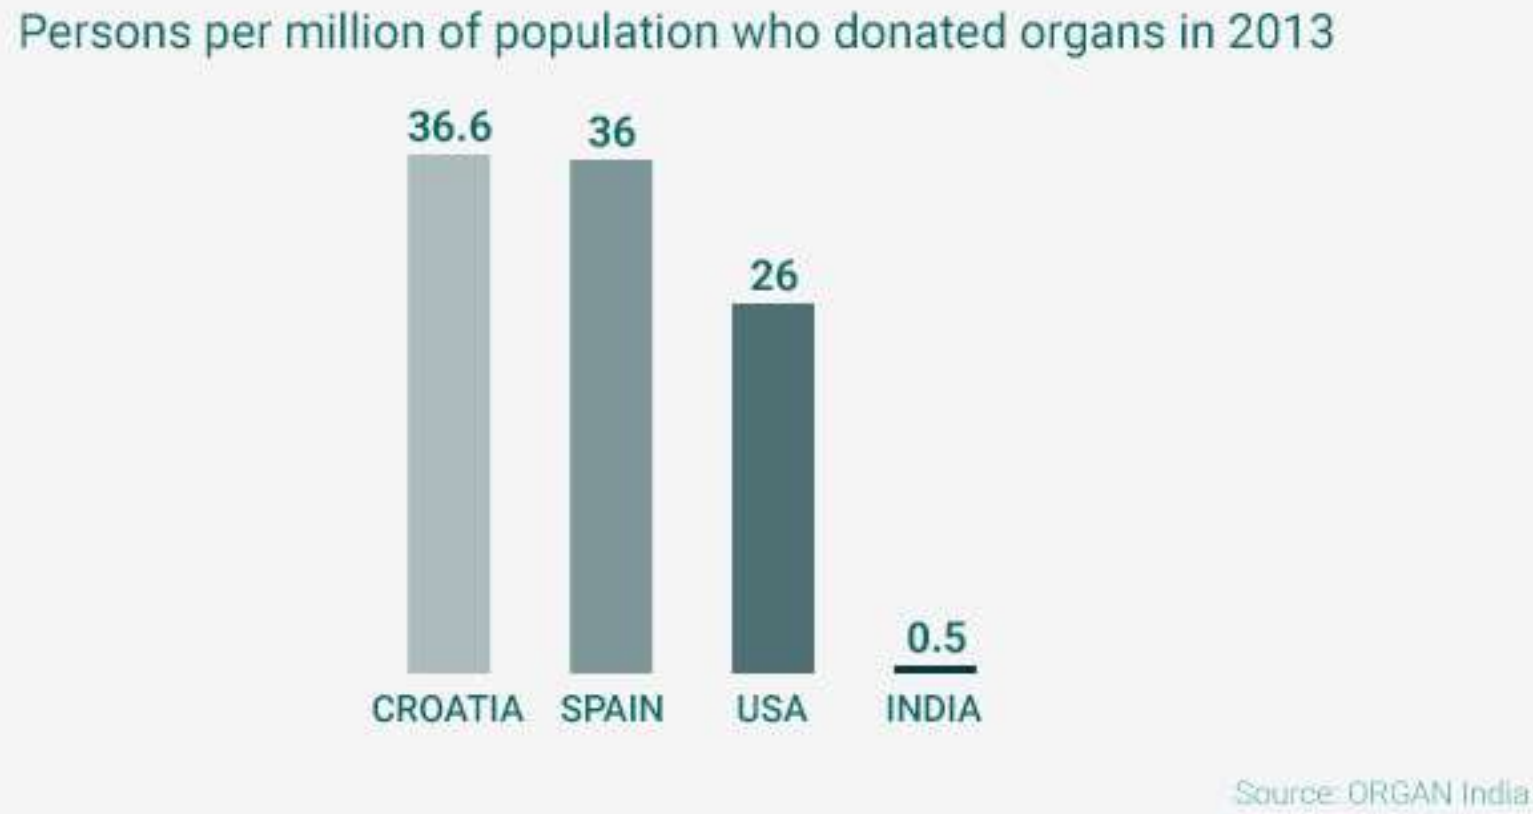

MYTH
v/s
FACT
Organ donation disfigures the body.
Donated organs are removed surgically and do not disfigure the body.

MYTH
v/s
FACT
Organs like heart, kidney & liver can be donated.
Eyes, Skin tissues, Tendons, Bone marrow & Heart valves can be donated

MYTH
v/s
FACT
If the family agrees to organ donation, doctors won't try hard to save the patient.
Doctors will do everthing in their power to save the patient.

MYTH
v/s
FACT
Organ donation is against my religion.
Almost all major religions support organ donation as an act of compassion and generosity.

Why India Needs To Donate Organs

Organ transplantation is often the last hope for patients suffering from end-stage organ failure. Donated organs can give them a second chance at life and enable them to lead healthier, more fulfilling lives.

DOWNLOAD FORMS (UNDER TRANSPLANTATION OF HUMAN ORGANS AND TISSUES RULES, 2014)

S.No.	Form No.	Description	Download
1	Form 1	For organ or tissue donation from identified living near related donor	
2	Form 2	For organ or tissue donation by living spousal donor	
3	Form 3	For organ or tissue donation by other than near relative living donor	
4	Form 4	For certification of medical fitness of living donor	
5	Form 5	For certification of genetic relationship of living donor with recipient	
6	Form 6	For spousal living donor	
7	Form 7	For organ or tissue pledging	
8	Form 8	For Declaration cum consent	
9	Form 9	For unclaimed body in a hospital or prison	
10	Form 10	For certification of brain stem death	

Medical reasons for not becoming a transplant donor

Even if you are a registered donor, your organs or tissue may be rejected after your death for medical reasons, for instance if you:

- had blood poisoning (sepsis)
- were infected with a virus
- acquired a tattoo or piercing in the 6 months before your death.

Donation only when the donor dies in hospital

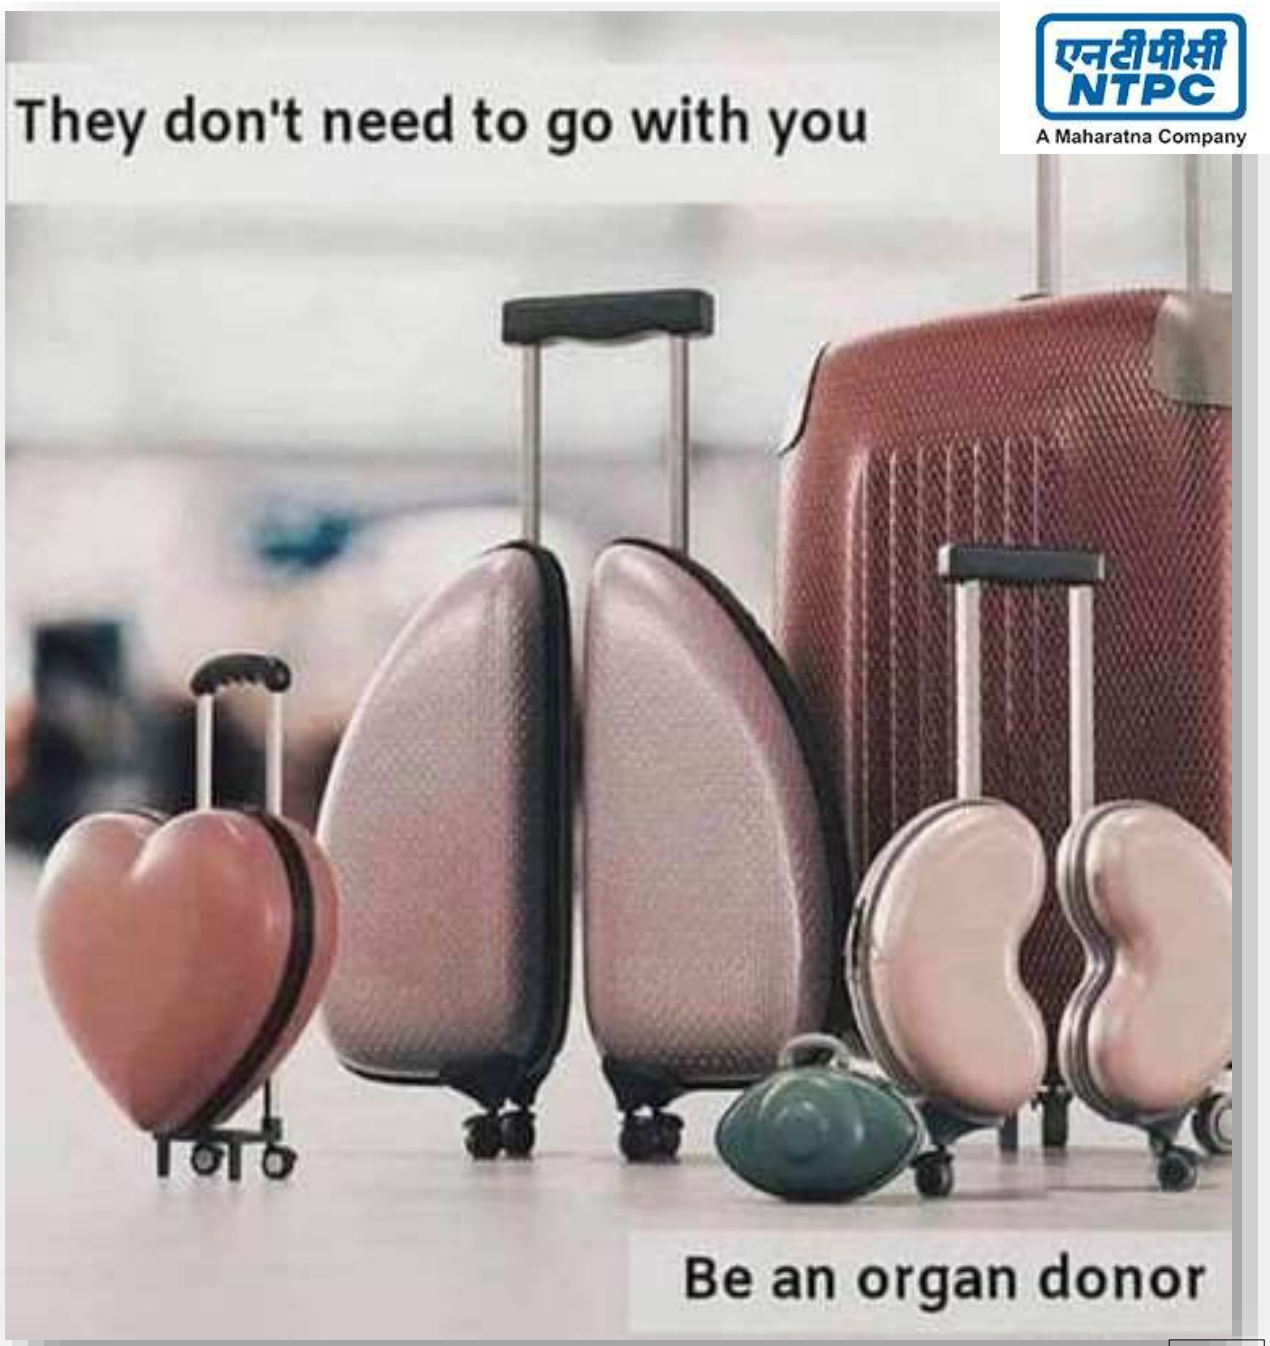

Organ donation is only possible when the donor has died in a hospital. Organs need a supply of oxygen-rich blood to remain suitable for transplantation. Donors are put on artificial respiration to keep their heart beating, so that oxygen-rich blood continues to circulate through their body.

By contrast, tissue donation is often possible if the donor dies in a non-hospital setting.

What is the time limit for organ donation after death?

Police NOC & Post-mortem in Medico-Legal Cases

Heart & Lungs	**4-6 hours**
Liver	**6-12 hours**
Kidneys	**Up to 30 hours**
Intestine	**6 hours**
Pancreas	**6 hours**
Eyes	**6 hours**

Remember,

PEOPLE LIVE
WHEN PEOPLE GIVE!

Educating communities about organ donation can lead to a higher number of registered donors and, consequently, a greater number of lives saved.

GAINING KNOWLEDGE IS FIRST STEP TO WISDOM,
SHARING IT IS FIRST STEP TO HUMANITY.
